QA Player

Player	QA Player	**Report date**	26 Oct 2026, 09:59 PM IST
Analysis	Batting	**Camera**	front-on
Video quality	Good	**Score status**	Provisional Technique Score

Three key takeaways

1. Balance at setup (0.02 × torso length) was your strongest measured area.
2. Shoulder line at setup (12°) is the measurement with the most room to improve.
3. Re-record: Film side-on at hip height, 8-12 m away, with the whole body, feet and bat in frame.

OVERALL TECHNIQUE SCORE

80 / 100

Provisional Technique Score

Provisional: uses only the 2 of 5 measurements available in this clip (17% of the scoring weight). Missing measurements are left out, not counted as zero, so the score may change with a clearer clip.

Evidence: Limited

Video quality: Good

Clear footage — measurements are as reliable as a single camera allows.

Video quality describes the footage, not the player's technique.

Area	Score	Measured
Balance	85/100	1 of 1
Head & body alignment	73/100	1 of 2

What's working

- Compact, side-on setup with the bat held close to the body
- Setup balance measured close to centred (0.02 torso lengths)
- Long front-leg stride and a high, upright finish

Measurements - front-on camera

Measurement	Value	Scale	What it means
Balance at setup (0.0s)	0.02 × torso length		Sideways gap between the hips and the feet at setup; smaller means more centred. Measured on an approximately timed frame, so treat it as a guide.
Shoulder line at setup (0.0s)	12°		How much the shoulder line tilts at setup. Measured on an approximately timed frame, so treat it as a guide.

Values are measured from the video. Target ranges are not shown until coach-approved references are available.

Technique timeline - front-on camera

Setup

Approximate timing - 0.0s (frame 0)

Stance before the movement starts.

Balance at setup: 0.02 × torso length

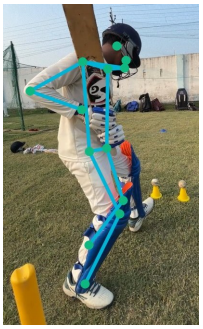

Shoulder line at setup: 12°

Backlift

Clear frame - 2.04s (frame 122)

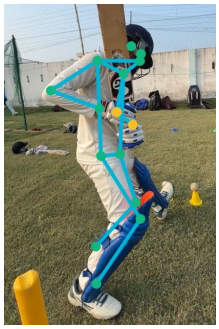

Highest hand position before the swing.

Downswing

Clear frame - 2.05s (frame 123)

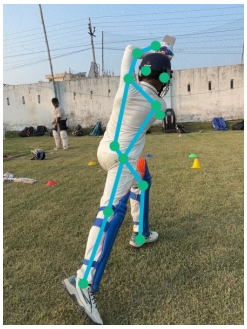

Fastest hand movement in the swing.

Impact

Approximate timing - 2.17s (frame 130)

Approximate moment of impact, judged from the hands' lowest point. Bat-ball contact itself isn't detected.

Follow-through

Clear frame - 3.1s (frame 186)

Highest hand position after the swing.

Frames are cropped around the player from the original video at the times shown. 'Approximate timing' frames are best estimates, not exact events.

Ball: The ball couldn't be tracked reliably in this clip, so no ball path is shown.

Coaching feedback

Priority to improve

Add a clear trigger movement and a slightly higher, smoother backlift so the swing starts in rhythm with the head steady over the ball.

Why it matters

A steady trigger and backlift help the feet, hands and head work together. This makes it easier to get into a balanced position at contact.

How to practise it

Do trigger-and-freeze reps and tee-line step-and-hit drills, and film from a steady front-on angle to check your head and front foot.

Based on measurements: Balance at setup: 0.02 × torso length; Shoulder line at setup: 12°. Coaching text is an AI interpretation of the video and these measurements.

Personalised drills

Drill	Objective and instructions	Dose	Avoid
Tee-line step and hit	Improve front-foot stride and the alignment of head and front foot toward the ball Place a ball on a cone. Step toward it, land the front foot beside the line, and hit through with the head over the front knee. Hold the finish for two seconds.	4 sets of 6	Overreaching with the front foot and leaning away from the ball.

Your action plan

1. Record a new clip: Film side-on at hip height, 8-12 m away, with the whole body, feet and bat in frame.
2. Practise “Tee-line step and hit” (4 sets of 6) to work on footwork.
3. Upload a new clip from the same camera angle in 1-2 weeks to track progress.

Filming tips for your next clip

• Film side-on at hip height, 8-12 m away, with the whole body, feet and bat in frame.

About this report

Each measurement is compared with a coaching reference and the results are combined using fixed weights. Missing measurements are left out rather than counted as zero. The score describes technique in this clip only; it isn't an official rating.

Video quality is rated from the footage only: Poor if the player was found in under 60% of frames, the player was too small, or joints were mostly unclear; Fair if any other filming issue was found; otherwise Good. It is not part of the technique score.

Front knee angle at impact was not measurable Measurements are 2D estimates from one camera; bat speed, ball speed and forces aren't measured.

AI-assisted coaching report. Not a medical assessment, does not guarantee injury prevention or performance, and is not an official selection credential.
