QA Player

Player	QA Player	**Report date**	26 Oct 2026, 10:12 PM IST
Analysis	Batting	**Camera**	front-on
Video quality	Good	**Score status**	Provisional Technique Score

Three key takeaways

1. Balance at setup (0.02 × torso length) was your strongest measured area.
2. Shoulder line at setup (12°) is the measurement with the most room to improve.
3. Add a side-on clip as well — knee bend and head position can only be measured side-on.

OVERALL TECHNIQUE SCORE

80 / 100

Provisional Technique Score

Provisional: uses only the 2 of 5 measurements available in this clip (17% of the scoring weight). Missing measurements are left out, not counted as zero, so the score may change with a clearer clip.

Evidence: Limited

Video quality: Good

Clear footage — measurements are as reliable as a single camera allows.

Video quality describes the footage, not the player's technique.

Area	Score	Measured
Balance	85/100	1 of 1
Head & body alignment	73/100	1 of 2

What's working

- Settled, side-on setup with the hips over the base (0.02 torso lengths, estimated phase).
- The finish is held and the body stays upright with the front leg extended.
- The batter recovers into a relaxed position after the shot.

Measurements - front-on camera

Measurement	Value	Scale	What it means
Balance at setup (0.0s)	0.02 × torso length		Sideways gap between the hips and the feet at setup; smaller means more centred. Measured on an approximately timed frame, so treat it as a guide.
Shoulder line at setup (0.0s)	12°		How much the shoulder line tilts at setup. Measured on an approximately timed frame, so treat it as a guide.

Values are measured from the video. Target ranges are not shown until coach-approved references are available.

Technique timeline - front-on camera

Setup

Approximate timing - 0.0s (frame 0)

Stance before the movement starts.

Balance at setup: 0.02 × torso length

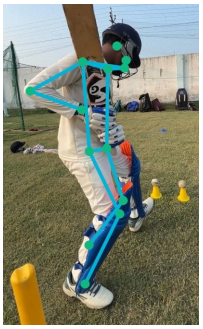

Shoulder line at setup: 12°

Backlift

Clear frame - 2.04s (frame 122)

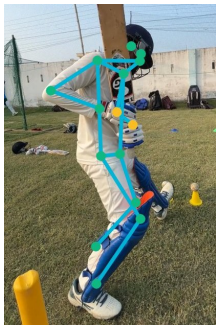

Highest hand position before the swing.

Downswing

Clear frame - 2.05s (frame 123)

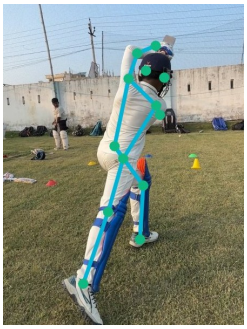

Fastest hand movement in the swing.

Impact

Approximate timing - 2.17s (frame 130)

Approximate moment of impact, judged from the hands' lowest point. Bat-ball contact itself isn't detected.

Follow-through

Clear frame - 3.1s (frame 186)

Highest hand position after the swing.

Frames are cropped around the player from the original video at the times shown. 'Approximate timing' frames are best estimates, not exact events.

Ball: The ball couldn't be tracked reliably in this clip, so no ball path is shown.

Coaching feedback

Priority to improve

Keep the head still and over the ball through contact, after a clear and repeatable backlift.

Why it matters

A still head helps the eyes track the ball and keeps the body in balance as it moves through the shot. A clear backlift makes the downswing easier to repeat.

How to practise it

Use the cone-ball drill with a freeze at contact, and film from the front-on view so that head position and the front knee can be measured.

Based on measurements: Balance at setup: 0.02 × torso length; Shoulder line at setup: 12°. Coaching text is an AI interpretation of the video and these measurements.

Personalised drills

Drill	Objective and instructions	Dose	Avoid
Cone-ball tee drive	Practise a consistent downswing and contact position on a fixed ball. Set a ball on a cone at the same spot. Take your stance, lift the bat, step to the ball, and drive it with the head still over the contact point.	4 sets of 6 shots	Lunging the head ahead of the front foot.

Progress comparison

Measurement	Previous (26 Oct 2026, 09:59 PM IST)	Latest	Change
Balance at setup	0.02 × torso length	0.02 × torso length	0.0 × torso length
Shoulder line at setup	12°	12°	0°
Overall score	80 (Provisional)	80 (Provisional)	

Compared with your 26 Oct 2026 batting clip from the same front-on camera angle. Only measurements taken in both clips are compared; differences in filming can also change the numbers. At least one of these scores is provisional, so compare them with care.

Your action plan

1. Add a side-on clip as well — knee bend and head position can only be measured side-on.
2. Practise “Cone-ball tee drive” (4 sets of 6 shots) to work on contact position.
3. Upload a new clip from the same camera angle in 1-2 weeks to track progress.

Filming tips for your next clip

• Add a side-on clip as well — knee bend and head position can only be measured side-on.

About this report

Each measurement is compared with a coaching reference and the results are combined using fixed weights. Missing measurements are left out rather than counted as zero. The score describes technique in this clip only; it isn't an official rating.

Video quality is rated from the footage only: Poor if the player was found in under 60% of frames, the player was too small, or joints were mostly unclear; Fair if any other filming issue was found; otherwise Good. It is not part of the technique score.

Front knee angle at impact was not measurable. Measurements are 2D estimates from one camera; bat speed, ball speed and forces aren't measured.

AI-assisted coaching report. Not a medical assessment, does not guarantee injury prevention or performance, and is not an official selection credential.
