QA Player

Player	QA Player	**Report date**	26 Oct 2026, 10:49 PM IST
Analysis	Batting	**Camera**	front-on
Video quality	Good	**Score status**	Provisional Technique Score

Three key takeaways

1. Balance at setup (0.04 × torso length) was your strongest measured area.
2. Shoulder line at setup (13°) is the measurement with the most room to improve.
3. Record a clearer clip using the filming tips below.

OVERALL TECHNIQUE SCORE

81 / 100

Provisional Technique Score

Provisional: uses only the 2 of 5 measurements available in this clip (33% of the scoring weight). Missing measurements are left out, not counted as zero, so the score may change with a clearer clip.

Evidence: Limited

Video quality: Good

Clear footage — measurements are as reliable as a single camera allows.

Video quality describes the footage, not the player's technique.

Area	Score	Measured
Balance	91/100	1 of 1
Head & body alignment	67/100	1 of 2

What's working

- The setup balance was measured as a small offset of 0.04 torso lengths, so the hips sat close to over the base.
- The player stays upright and balanced through the swing.
- The bat finishes in a controlled upright position.

Measurements - front-on camera

Measurement	Value	Scale	What it means
Balance at setup (36.87s)	0.04 × torso length		Sideways gap between the hips and the feet at setup; smaller means more centred.
Shoulder line at setup (36.87s)	13°		How much the shoulder line tilts at setup.

Values are measured from the video. Target ranges are not shown until coach-approved references are available.

Analysed 0:36-0:46 of the clip, the part with the most movement.

Technique timeline - front-on camera

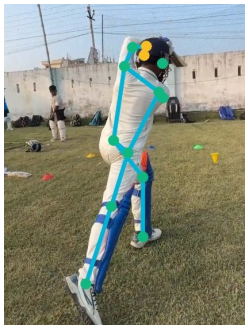

Setup

Clear frame - 36.87s (frame 1106)

Stance before the movement starts.

Balance at setup: 0.04 × torso length

Shoulder line at setup: 13°

Backlift

Clear frame - 43.53s (frame 1306)

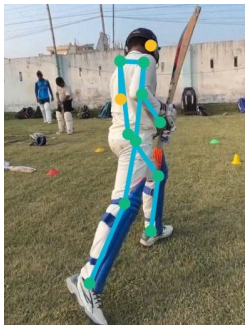

Highest hand position before the swing.

Downswing

Clear frame - 45.23s (frame 1357)

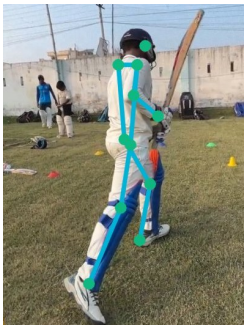

Fastest hand movement in the swing.

Impact

Approximate timing - 45.7s (frame 1371)

Approximate moment of impact, judged from the hands' lowest point. Bat-ball contact itself isn't detected.

Follow-through

Approximate timing - 45.97s (frame 1379)

Highest hand position after the swing.

Frames are cropped around the player from the original video at the times shown. 'Approximate timing' frames are best estimates, not exact events.

Ball: The ball couldn't be tracked reliably in this clip, so no ball path is shown.

Coaching feedback

Priority to improve

Add a clear stride toward the ball so your weight can move into the shot.

Why it matters

Without a visible stride, the swing is likely to rely on the arms, which makes timing and control harder.

How to practise it

Use Stride and Hold in front of a mirror, then move to drop-feeds and check that your head stays over the front foot.

Based on measurements: Balance at setup: 0.04 × torso length; Shoulder line at setup: 13°. Coaching text is an AI interpretation of the video and these measurements.

Personalised drills

Drill	Objective and instructions	Dose	Avoid
Stride and Hold	Build a clear front-foot movement and a steady balanced finish. Start in your stance. Take a short stride toward the ball, hold the position for two seconds, and check that your head is over the front knee.	3 sets of 8 reps	Leaning back or taking the stride too long.

Progress comparison

Measurement	Previous (26 Oct 2026, 10:12 PM IST)	Latest	Change
Balance at setup	0.02 × torso length	0.04 × torso length	+0.02 × torso length
Shoulder line at setup	12°	13°	+1°
Overall score	80 (Provisional)	81 (Provisional)	

Compared with your 26 Oct 2026 batting clip from the same front-on camera angle. Only measurements taken in both clips are compared; differences in filming can also change the numbers. At least one of these scores is provisional, so compare them with care.

Your action plan

1. Record a new clip using the filming tips below.
2. Practise “Stride and Hold” (3 sets of 8 reps) to work on footwork.
3. Upload a new clip from the same camera angle in 1-2 weeks to track progress.

Filming tips for your next clip

• Add a side-on clip as well — knee bend and head position can only be measured side-on.

About this report

Each measurement is compared with a coaching reference and the results are combined using fixed weights. Missing measurements are left out rather than counted as zero. The score describes technique in this clip only; it isn't an official rating.

Video quality is rated from the footage only: Poor if the player was found in under 60% of frames, the player was too small, or joints were mostly unclear; Fair if any other filming issue was found; otherwise Good. It is not part of the technique score.

Front knee angle at impact was not measurable. Measurements are 2D estimates from one camera; bat speed, ball speed and forces aren't measured.

AI-assisted coaching report. Not a medical assessment, does not guarantee injury prevention or performance, and is not an official selection credential.
